

CASE STUDY

Learn how Whiz reduced the physically demanding aspect of hospital employees' jobs while also increasing patient and employee happiness.

Asito is a Northwest Hospital in Alkmaar, the Netherlands.

The hospital was looking for an innovative solution that could create an ergonomic working environment, to increase employee satisfaction. So they hired Whiz.

They also wanted to move more towards visible cleaning, as seeing someone cleaning gives a sense of security and confidence.

THE CHALLENGE

Long corridors are common in hospitals, and Asito is no exception. Every day, Asito corridors must be thoroughly cleaned to ensure hygiene standards and meet patient expectations.

Hoovering was a physically difficult and time-consuming activity for Asito Hospital and Whiz fixed that. With Whiz, Asitos' cleaning crew had more time to focus on other important cleaning tasks, such as running additional disinfection rounds.

The hospital also wanted to integrate new technology in order to position itself as an innovative hospital, thus Whiz was the ideal choice.

THE RESULT - WHIZ IS A GREAT "PROOF OF CLEAN" SOLUTION

Whiz replaced a lot of repetitive tasks at the hospital that were physical and demanding for Asito Hospital employees.

It also provided patients with tangible proof of cleanliness, and assisted Asito Hospital in demonstrating that the hospital cared about keeping their communal areas clean. By demonstrating that the hospital maintained regular cleaning, all patients and staff members felt save.

Overall, Whiz generated a positive response and caught the curiosity of both patients, employees, and doctors.

Visually demonstrated prove of clean to patients.

Positioned the hospital as innovative.

Increased employee work satisfaction.

Whiz

“

"Cleaning in hospitals was traditionally performed at night when patients were not around, but now, we have Whiz. With Whiz, we can achieve visual cleaning, giving consumers the impression that cleaning is actually going places! There is a considerable difference, for example, between finding your desk clean early in the morning and seeing someone physically cleaning it. Whiz made it all possible, and we can work to improve that aspect of our hospital.

Now that we are using Whiz, people are reacting to it, both patients, employees and doctors see Whiz and laugh at it.

I think Whiz is the most positive effect we have now!"

Marco Lagrand, Facilitair Management at NWZ
